SUMMARY

Full-stack engineer and technical lead with 5+ years taking web applications from zero to one, modernizing legacy codebases, and scaling production systems. Deep expertise in Go and the JavaScript/TypeScript ecosystem (React, Next.js, Node.js, NestJS). Currently leading architecture of a multi-cloud operations platform that unifies billing and operations data across 6 cloud providers.

SKILLS

Languages: Go, TypeScript, JavaScript, SQL, Solidity
Frontend: React, Next.js, Redux Toolkit, Sass, HTML, CSS
Backend: Node.js, Express, NestJS, PostgreSQL, Redis, BullMQ, MongoDB, REST APIs, Microservices
Cloud and DevOps: AWS (ECS, Lambda, S3, Cognito), GCP (Cloud Run, Firestore), Docker, GitHub Actions, CI/CD
Web3: Solidity, Smart Contracts, Polygon, web3.js, NFT Development

EXPERIENCE

Technical Lead – AND AI — Dec 2025 – Present
Singapore, Remote

- Own all architecture and infrastructure decisions for an internal cloud cost management platform, leading a team of 2 developers
- Designed ETL pipelines (Redis, BullMQ) ingesting billing and operations data from 6 cloud providers — AWS, Azure, GCP, Alibaba, Tencent, Huawei — into a single unified platform
- Engineered a job-scheduling system that refreshes provider data on a fixed cadence, so dashboards never serve stale numbers
- Set up CI/CD with full deployment log trails, removing all manual steps from the release process

SDE II – Coreyo — Aug 2023 – Aug 2025
Bengaluru, India

- Led rewrite of the core backend from NestJS to Go, measurably cutting median API latency and monthly server costs
- Split the monolith into 5 independently deployable Go microservices, isolating failures to a single service
- Rebuilt the React frontend with route-based code splitting to shrink the initial bundle and speed up first load
- Replaced a multi-step manual deployment process with GitHub Actions pipelines, making releases one-click and auditable

Full Stack Developer – Inovatyv — May 2022 – Aug 2023
Singapore, Remote

- Built Neon Sundae, a freelance marketplace on Polygon, from scratch as part of a 4-person team
- Wrote, tested, and deployed Solidity contracts for NFT minting and airdrops that settled production transactions on-chain
- Wired the React frontend to Polygon via web3.js, handling wallet connection, signing, and transaction state
- Redesigned wallet onboarding from a single form into discrete guided steps, reducing drop-off between sign-up and first transaction

Software Engineer – Outofbox — Sep 2020 – Mar 2022
Bengaluru, India

- Built Blur Social, a consumer social app, end-to-end: feed, profiles, likes, comments, and follows
- Integrated Stripe subscriptions for the premium tier, launching the company's first paid plan
- Rewrote the auth service, speeding up login and token-refresh response times
- Shipped an infinite-scroll React feed with profile pages that lifted session duration and engagement

EDUCATION

BCA, Indira Gandhi National Open University (IGNOU), New Delhi, India — In Progress
Computer Science Coursework, Graphic Era Hill University, Bhimtal, Uttarakhand, India — 2012 – 2015
